

Enabling scale and reliability for the future growth of Omni Wallet

Omni Wallet is a mobile wallet with support for 25 networks, offering a broad range of features such as staking, swapping, lending, and yield vaults. Its UI is easy to navigate, and it includes a curated section of DeFi projects, DAOs, and the broadest NFT support (on more than 9 chains). With its innovative approach to web3 education, Omni Wallet is a unique and feature-rich solution.

The Challenge

Omni Wallet faced a challenge in finding the right RPC infrastructure solution that met its basic needs: high uptime and reliable RPC endpoints. **Public endpoints were too limited and prone to downtime, making it impossible to scale with the increasing demand of the wallet.** Omni needed an RPC provider it could trust with its large volumes of sensitive data.

"At one point, we realized that we were in trouble with finding the right solution for our RPC infrastructure. The public endpoints we were using were not enough, and we couldn't scale to meet the demands of our users." - **Alex Harley, CTO Omni Wallet**

High Uptime

Trustworthy & Reliable RPC Endpoints

Multichain capabilities

Portal is meant for wallets

Omni chose Portal for its reliability, **99% uptime**, competitive pricing, and **broad network support that matched its own multichain focus**. This opened up Omni's opportunities to integrate with new chains such as Gnosis and OKC.

The Solution

Driving adoption of Omni Wallet

Trust starts with reliability

For Omni's CTO, Portal's "latency times are excellent, and we've never seen downtime." Portal enables virtually 99 % uptime for applications while offering a clear path for scaling.

Multichain support

Unlocked doors to rapid support for cutting-edge EVM chains like Arbitrum, Optimism, OKC, among **13+ chains**. Portal has the ability to spin up new chains and gaming subchains in a matter of days.

Accelerate onboarding

Portal goes the extra mile to offer personalized support for developers, being completely available to answer questions and help apps in times of need.

"We're thrilled to have found Portal as our partner in providing the best possible RPC infrastructure for our users. Their quick deployment of support for new chains allowed us to pivot faster and offer our users access to new opportunities in just a few hours instead of weeks. We're happy to have them as our primary RPC provider" - **Alex Harley, CTO Omni Wallet**

Portal is Omni Wallet's default RPC provider

In the early stages of this partnership, Portal became the primary RPC provider for 9 of Omni Wallet's supported chains. After seeing the improvements in latency and performance across these chains, Omni chose to make Portal the default RPC provider for the rest of the wallet's supported chains.
